Count the number of salespeople currently listing orders in the Orders table

select distinct count(snum) from orders

Find all salespeople whose name starts with 'P' and the fourth character is 'l'.

select sname from salespeople where sname like "P__I%";

Find the largest orders for Serres and Rifkin.

select s.sname ,max(amt) from salespeople s join orders o on s.snum=o.snum where s.sname in("Serres","Rifkin")

Select all the possible combinations of customers that you can assign.

Write a select command using a correlated subquery that selects the names and numbers of all customers with ratings equal to the maximum for their city.

Write a select command that produces the rating followed by the name of each customer in San Jose.

select rating,cname from customers where city="San Jose"

Find all orders with above average amounts for their customers.

select c.cnum,amt from customers c join orders o on c.cnum=o.cnum where amt>(select avg(amt) from orders);

Write a query that calculates the amount of the salesperson's commission on each order by a customer with a rating above 100.00.

Write a query that produces all pairs of salespeople with themselves as well as duplicate rows with the order reversed.

Write a query that joins the Customer table to itself to find all pairs of customers served by a single salesperson.

Write 2 queries that select all salespeople (by name and number) who have customers in their cities who they do not service, one using a join and one a correlated subquery. Which solution is more elegant?

Write a query that produces all pairs of orders by a given customer. Name that customer and eliminate duplicates.

select o1.onum,o2.onum from orders o1 cross join orders o2 where o1.onum>o2.onum
group by o1.cnum

Write a query on the Customers table whose output will exclude all customers with a rating <= 100.00, unless they are located in Rome.

Write a query that selects all orders save those with zeroes or NULLs in the amount field

select onum from orders where amt=0 or amt =null;

Find all salespeople for whom there are customers that follow them in alphabetical order.

Write a query that produces the names and ratings of all customers of all who have above average orders.

select cname , rating from customers where customers c join orders o on
c.cnum=o.cnum where amt>avg(amt);

Write a SELECT command that produces the order number, amount and date for all rows in the order table.

select onum,amt, odate from orders;

List the commissions of all salespeople servicing customers in London.

select s.snum ,sname ,comm from salespeople s join customers c on s.snum=c.snum
where c.city="London";

Write a query using the EXISTS operator that selects all salespeople with customers located in their cities who are not assigned to them.

select s.snum,c.cnum from customers c join salespeople s on c.snum=s.snum where
city exists (select 1 from customers c join salespeople s on s.snum=c.snum where
s.city!=c.city)

Count the number of salespeople registering orders for each day. (If a salesperson has more than one order on a given day, he or she should be counted only once.)

Write a query that will produce the SNUM values of all salespeople with orders currently in the Orders table (without any repeats).

```
select distinct o.onum,s.snum from salespeople s join orders o on s.snum=o.snum;
Find all orders credited to the same salesperson who services Hoffman (CNUM
2001).
```

```
select o.onum,o.amt from orders o where o.snum in (select c.snum from customers
where c.cnum=2001);
```

Write a query that will give you the names and cities of all salespeople in London with a commission above 0.10.

```
select sname,city from salespeople where city="London" and comm>0.10
```

Write a query that selects each customer's smallest order

```
select c.cnum ,min(o.amt) from customer c join orders o on c.cnum=o.cnum group
by c.cnum
```

Find all customers who are not located in San Jose and whose rating is above 200.

```
select * from customers where rating>200 and city<>"San Jose";
```

Evaluate the following query : SELECT * FROM orders WHERE NOT ((odate = 10/03/96 AND snum > 1002) OR amt > 2000.00);

show data from order

Which salespeople have been assigned to the same city but get different commission percentages?

Does the customer who has placed the maximum number of orders have the maximum rating?

On which days has Hoffman placed orders?

Which salespeople have no orders between 10/03/1996 and 10/05/1996?

*

On which date has each salesperson booked an order of maximum value?

Are all customers not having placed orders greater than 200 totally been serviced by salespersons Peel or Serres?

Select the total amount in orders for each salesperson for whom the total is greater than the amount of the largest order in the table.

Is there any evidence linking the performance of a salesperson to the commission

that he or she is being paid?

Which salesperson(s) should be fired?

What is the total income for the company?
